WHY WE SHOULD ALL USE A HEIGHT ADJUSTABLE TABLE

MUSCLE PROBLEMS

If you stay seated all day, your leg muscles and gluteus muscles will become inactive, thus reducing your ability to sit up straight.

POOR CIRCULATION

Remaining seated for too long may result in swollen ankles and varicose veins, caused by fluids sinking down into the legs.

BRAIN ACTIVITY

If you stay fixed in one position, insufficient fresh, oxygen-rich blood will be pumped around the body, causing brain function to slow down.

HEART RISKS

Since muscles are less active while a person is seated, they burn less fat. Together with a higher blood pressure and elevated cholesterol levels, this increases the risk of heart disease.

BACK PROBLEMS

Staying seated for long periods causes weight pressure to be unevenly distributed over the spine, leading to spinal problems in the lower back.
