

# BM7 BIOCIDES

A highly effective biocide specifically formulated for microbial growth control over a wide spectrum of bacteria & other micro-organisms found in system water.

Protects the systems against harmful sludge and debris build-up. Ideal for low temperature or underfloor heating circuits.

By dosing the system with BM7, it will provide the following benefits:

- ✓ Helps to protect against bacterial slimes, algae and biofilms forming.
- ✓ Removes bacterial contamination and fungus.
- ✓ Prevents scale & corrosion properties when used with inhibitor.
- ✓ Fully compliant with **BS 7593: 2019** for preparation, commissioning and maintenance of domestic central heating and cooling water systems.

**Note:** BM7 should be dosed at 0.5 % of system volume (0.5 litres treats 100 litres of system water).

A 500 ml bottle of BM7 contains sufficient treatment for a typical heating system with domestic hot water cylinder and up to ten radiators. BM7 can be used in the systems already treated with BM1, corrosion inhibitor and anti-scale chemical for heating system treatments.

Use biocides safely. Always read the label and product information/instructions before use.
