

# System Health Check

## 61161

- Postal laboratory diagnostic test to identify system water quality
- Fast accurate results, confirms presence of any debris or cleaner residue, or if the system clean and dosed correctly.
- Easy-to-read report and recommendations
- Results on portal for easy access and history of site.

Fernox System Health Check is a premier postal sampling service which provides accurate laboratory diagnosis of central heating problems, in order to ensure the correct action is taken to solve the particular issue. As part of this service Fernox carries out a full analysis of the system water and will advise on the appropriate treatment before confirming that the system has been correctly treated and fully protected.

### Application

Simply fill one sample bottle with system water and the other with mains water (i.e. kitchen tap), complete the enclosed order form and return the samples and questionnaire in the Freepost envelope. The results will be returned directly to the customer.

Interpretation of the results is based on the samples being representative of the system and treatment being with Fernox products.

### Package, Handling & Safety

Fernox System Health Check provides all the necessary apparatus required to gather samples for testing. The micro-bottle kit consists of two sample bottles, a water analysis order form and a Freepost envelope.
