ABOUT THE KOALA MATERIAL

Made from recycled material

Fire Retardant Material

Sound Absorbing Material

Antifungal Material

Let's delve into the remarkable attributes of our Koala material. We're thrilled to offer PET material crafted from recycled sources, showcasing our commitment to sustainability. Moreover, our material boasts antifungal properties, proactively preventing mold growth and safeguarding against potential issues.

What truly sets our Koala material apart is its multifaceted benefits. Not only does it champion eco-friendliness through recycled PET materials, but its antifungal characteristics ensure a healthier and safer environment for all occupants.

Our 12mm and 24mm panels feature impressive Sound Absorption Coefficients, making them ideal for environments where noise reduction is paramount. Whether it's a bustling office or a lively restaurant, our Koala material contributes to a more serene atmosphere.

Additionally, our fire-rated material provides an added layer of safety and peace of mind in any setting. When you choose our Koala material, you're not just acquiring a product; you're investing in quality, sustainability, and innovation.

RECYCLING PET, REDEFINING SPACES

At Koala Acoustic, sustainability isn't an add-on – it's part of our story. Each panel is crafted from recycled plastic bottles, transforming waste into purposeful design. Engineered to soften sound and create calmer spaces, Koala panels combine exceptional acoustic performance with vibrant, solid colour throughout. They have become a trusted choice for managing reverberant sound and elevating interiors across workplaces, education, hospitality and beyond.

Our recycling process ensures every Koala panel has a life beyond its first use. This circular approach reduces waste, conserves energy, lowers carbon emissions and helps protect natural habitats. When panels reach the end of their service life, their materials can be recovered and reintroduced into production, keeping valuable resources in circulation and aligning acoustic wellbeing with environmental responsibility.

Guided by a mission to improve wellbeing and create healthier, happier spaces worldwide, Koala Acoustic continues to deliver innovative acoustic solutions and furnishings designed for the needs of the modern workplace and beyond.

FROM BOTTLE TO PANEL

Each panel is crafted from 100% polyester fibre, with up to 100% of the material sourced from recycled PET, mainly from plastic bottles. With low embodied energy and no chemical binders such as formaldehyde, Koala panels support healthier indoor air quality while reducing environmental impact.

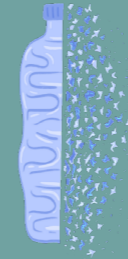

THE PET PROCESS

The journey from a plastic bottle to a finished Koala Acoustic product.

Starts With Recycling

Plastic bottles, along with your other recyclables, are collected and transported to a recycling facility.

Bottle Scraps

At the facility, the plastic is prepared for recycling. The bottles are first cleaned, stripped of their labels, and shredded into small pieces.

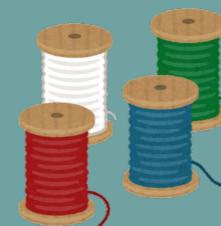

Chips

The scraps are sorted and cleaned to ensure they are free from any impurities or unwanted materials. Once cleaned, they are chopped into flakes, melted, and reformed into chips.

Fibres

The chips are processed by melting them and then extruding them into fibres.

Processed Fibre

The fibres are crimped, cut, drawn and stretched into a web.

Koala Acoustic Product

The fibre is compressed into panels and cut ready for use in all of our Koala Acoustic Products.
